

Building with Firebuilder

To begin, login to your AES dealer account and then click on the **FIREBUILDER** option on the top menu bar as shown below:

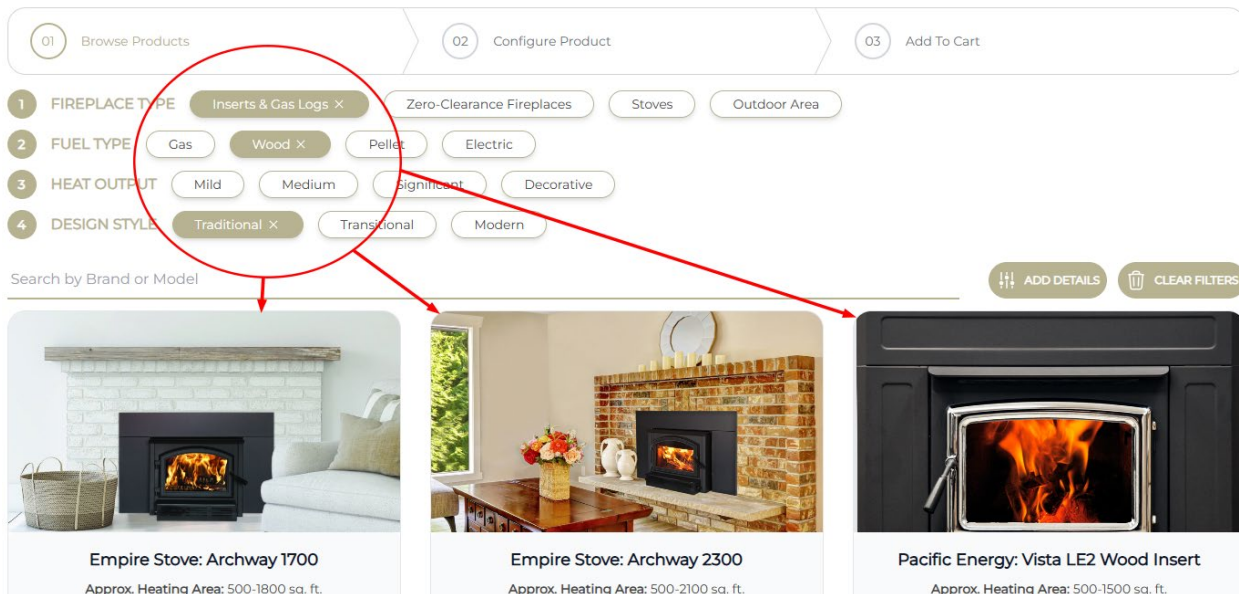

You will then be presented with the FIREBUILDER interface:

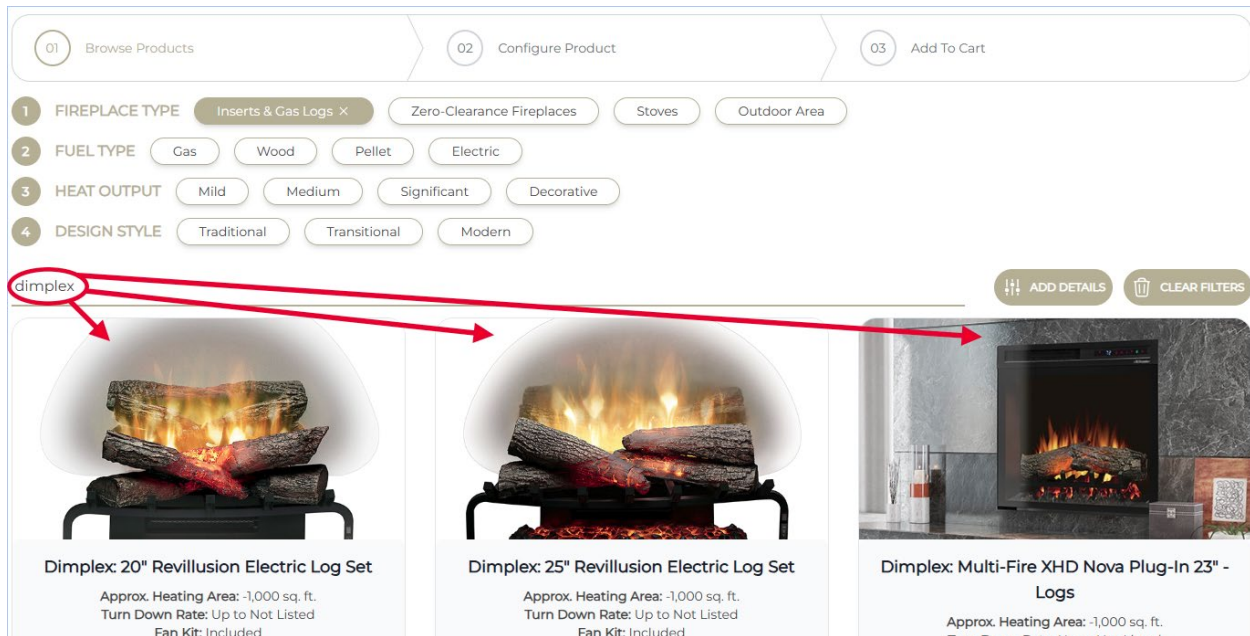

From this page, you can start building your solution using several tools.

The first method for building uses the 4 options labeled on the left hand side: **FIREPLACE TYPE**, **FUEL TYPE**, **HEAT OUTPUT** and **DESIGN STYLE**. Selecting or deselecting these will change the display below with the results of the options that are selected.

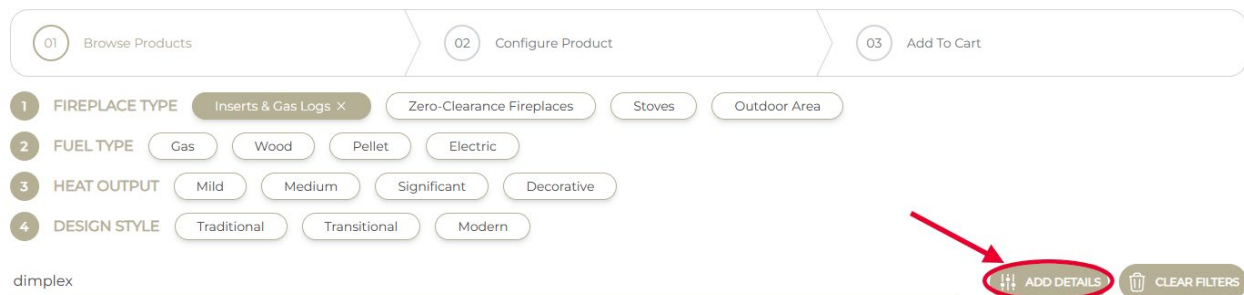

The second method of building is to enter a search keyword in the Firebuilder search box to filter/find the unit you are looking for.

(Tip: for a more successful search, it is encouraged to use fewer keywords as using too many might filter out more results than you might like)

There is another set of filters you can use by clicking the ADD DETAILS button on the right side or the Firebuilder search bar:

This will allow you to enter search criteria including **FRONT WIDTH**, **BACK WIDTH**, **FIREPLACE HEIGHT** and **FIREPLACE DEPTH**. This narrows your search to products which will fit in that space.

Additional Filter Options

Front Width (in inches)*
This is just the fireplace itself—not the stone, tile, or mantel around it.

Back Width (in inches)*
This is the back width of the inside of the fireplace.

Fireplace Height*
This is just the fireplace itself—not the stone, tile, or mantel around it.

Fireplace Depth*
This is the depth at the bottom of the fireplace from front-center to the back-center.

What kind of fuel do you want to use?*

☐ Gas
☐ Wood
☐ Pellet
☐ Electric

→

Once you've arrived at the unit you would like to build for, simply click on the picture or the **Configure Product** button below item description to begin the build for that particular unit. You will also find links to manuals and other documents for that unit.

The Opel Plus series has taken the Opel family of catalytic fireplaces to the next level. EPA certified at 0.7g/hr makes the Opel Plus one of the most advanced and cleanest units available on the market today, yet it still maintains its classic styling. In the past, Popular Science Magazine has recommended the Opel for its efficiency and reduction of emissions. Over the years this technology has only improved and been refined to make the Opel Plus what it is today.

RSF: Opel 3 Plus

Approx. Heating Area: 1,500-3,000 sq. ft.
Up to 5 hours
Fan Kit: Optional
Up to 18 inches
\$\$\$

Decorative Fronts*

Clean Face Kit – Opel2C & Opel3C

Available Accessories

- ☐ Opel Firescreen - For Use to Burn with Door Open - Decorative Use Only
**Voids EPA Certification While in Use
- ☐ Gold Plated Decorative Door Trim for Opel3
- ☐ Pewter Plated Decorative Door Trim for Opel3
- ☐ Painted Black Decorative Door Trim for Opel3

Venting Options

Add Vent Kit

You will be presented with the proper drop down and checkbox options for that unit which will help guide you through the building process.

If an option choice is required to complete the unit, it will be noted by a red “*” (asterisk) and the unit will not add to cart until selected.

In the example above, you can see the first option: “Decorative Fronts” is required. Choose the appropriate option to get it ready for adding to your cart.

Next, choose the checkboxes for **Available Accessories** that you wish to add as well.

RSF: Opel 3 Plus

Approx. Heating Area: 1,500-3,000 sq. ft.
Up to 5 hours
Fan Kit: Optional
Up to 18 inches
\$\$\$

Decorative Fronts*

Clean Face Kit – Opel2C & Opel3C

Select Decorative Front

Clean Face Kit – Opel2C & Opel3C

Classic Black Decorative Cast Iron Grill (Set)

Black Louver Assembly (Set)

Available Accessories

- ☐ Opel Firescreen - For Use to Burn with Door Open - Decorative Use Only
**Voids EPA Certification While in Use
- ☒ Gold Plated Decorative Door Trim for Opel3
- ☐ Pewter Plated Decorative Door Trim for Opel3
- ☐ Painted Black Decorative Door Trim for Opel3

Next, based on the customer’s installation scenario, you can quickly add all the appropriate venting components with one click.

To do so, click on the Add Vent Kit button to make your selection. It will bring up a window with your choices. Find your solution, click the button next to it, and then Confirm.

NOTE: You can ‘fine tune’ your venting later once it’s in the cart. It will list all of the individual components which make up the system you selected. This allows you to add/remove/adjust qty’s.

Vent Kits ×

☐ 7 Inch - Duravent - 1 Story-Vertical Vent Kit (AES)
 ☐ 7 Inch - Duravent - 2 Story-Vertical Vent Kit (AES)
 ☐ 7 Inch - Duravent - 3 Story-Vertical Vent Kit (AES)
 ☐ 7 Inch - ICC - 1 Story-Vertical Vent Kit (AES)
 ☐ 7 Inch - ICC - 2 Story-Vertical Vent Kit (AES)
 ☐ 7 Inch - ICC - 3 Story-Vertical Vent Kit (AES)

Confirm

Once you have completed all selections, click on the **Add to Cart** button to move the unit/parts/venting to your cart. This operation requires a bit of heavy lifting by the Firebuilder module, so it may take a moment before you see the items displayed in your cart after clicking the button.

At this point, you may add or remove items (or change quantities) in order to custom tailor the cart to your customer’s order. Alternately, you can also click the **Remove All** button if you wish to build a different solution.

Thank you for your time reading the tutorial sheet about Firebuilder, a great feature to help dealers and their staff arrive quickly at solutions for their customers. We hope you find this a valuable tool in creating sales rather than spending time researching information that is now at your fingertips.
